

Principles of Physics – Physics 201

SUNY Cortland Physics Department

Catalog Description

Fundamental principles of motion and dynamics using methods of calculus. Topics include motion in one, two and three dimensions, mechanical equilibrium, momentum, energy, rotational motion and dynamics, periodic motion, gravitation and conservation laws. Prerequisite: Calculus, which may be taken concurrently.

The Point of this Class

Physics is an exciting and demanding subject. Physicists make predictive models of reality based on assumptions about the nature of our world. If a model's predictions are born out experimentally then the elements of the model tell us about the physical laws that govern our world. In Physics 201 we will be covering mechanics and thermodynamics. This entails learning physical laws, the mathematical machinery that allows these laws to be quantitatively predictive, assessing the validity of these laws experimentally, learning various techniques to help organize your thinking about a physical situation and most importantly developing the ability to reason your way through the application of these tools to physical situations.

At the end of this course you must:

- Have a firm understanding of: the motion of an accelerating object, the motion of an object subject to external forces, the implications of the conservation of energy and momentum for the motion of a set of objects, how an object rotates and what it means for an object to oscillate.
- Demonstrate the ability to apply this understanding to analyze new situations using the problem solving techniques presented in this course.
- Be able to carefully analyze data taken in lab, estimate the uncertainty in the analyzed results, draw valid conclusions from the results, and present the results in an appropriate and coherent manner.
- Reflect on the process and context of the scientific and technological enterprise and its ethical implications.

Physics 201 provides a sound foundation for the sciences and engineering. It is also the first course on the road to becoming a physics major.

Basic Information

Instructor: Doug Armstead

Office: 127 Bowers (607) 753-2919

Office Hours: MWF 11-noon. These are just the times I guarantee. I am available other times so feel free to drop by or to contact me for an appointment.

Email: douglas.armstead@cortland.edu

Course website: www.facultyweb.cortland.edu/douglas.armstead/S23/Phys201.html.

Lecture: meets MWF 9:10-10:00am in Sperry 104.

Recitation: meets T 10:05-10:55am in Van Hoesen B0134. Recitation activities are graded, be sure to attend.

Laboratory meets: meets R at either 9am or 11am in Bowers 1110.

Class Text: *Essential University Physics 4th Ed.* by Richard Wolfson, published by Pearson, ISBN: 978-0-13-498855-9

Laboratory Manual: see lab instructor.

Prerequisites: Calculus I or A.

Expectations

What you should expect from me:

- Explanations of physical concepts that include concrete examples and, where reasonable, demonstrations.
- In-class examples that help you to understand the kind of reasoning that is necessary to do the problems you will encounter in the homework and on exams.
- Careful and respectful consideration of your questions.
- An open door policy—if my office door is open you should feel free to come in and talk about physics. This is in addition to my regularly scheduled office hours listed above.

What I expect of you:

- Your presence in class, both physical and mental, for the entire class period.
- For you to be prepared when you arrive at class. I have selected the text because it is readable and I expect you to have completed the assigned readings before you arrive. This includes keeping track of questions the reading inspires and bringing them to class. It also includes working through the reading exercises (solutions of which appear at the back of the text).

- If you have a question, ask it. I strongly encourage you to do this during class since one topic builds on the last. Your fellow classmates will thank you—if you are unclear on something, chances are the person next to you is, too.
- Be considerate of your fellow classmates by turning off your cell phones during class and not eating in class.
- Submit work for grading that is your own. If you copy from another student or source and submit it for a grade, then you risk receiving an F in the course.

Grades

You start this class out with an A. Over the course of this semester your grade will be adjusted based on the degree of mastery of the material you show through your homework, in your labs, on the midterm exams and on the final exam. The final score for the class has the following weighting:

10%	Problem sets
20%	Labs a required part of the course
45%	Midterm Exams #1 - 3
5%	Reports
5%	Recitation Activities
15%	Final Exam

Graded Elements

Problem sets: Problem sets (typically 5-15 problems) will be assigned frequently and due most weeks at 5pm. You are welcome to work in groups to understand the problem but you must independently write your solution.

Solution Format:

- All pages must be stapled together.
- Use a dark pencil or pen.
- The logic of your solution should begin with a clear statement of the basic principle(s) and flow from complete sentences and clear diagrams. Each step should follow clearly from the one before.

Seldom will your first attempt at a solution be of the quality you should hand in. I expect you to proofread, correct, edit, and generally clean up your solutions.

Labs: Your lab grade will be determined by your lab reports both formal and informal as well as your performance in the lab. Since the lab is a required part of the course, **missing more than 3 lab sessions will result in a failing grade for the course.**

Exams: The exam format will include problems that probe both your conceptual and qualitative understanding of the material. Exams will be taken in class and you will be allowed

one 3x5 index card with your own notes on it for each exam. The final exam will be cumulative. **You must notify me in advance of a conflict between a test and a college-sponsored function. Failure to do so will result in a zero for that exam. In case of emergency I must be notified immediately.** A make-up exam will only be administered for illness that requires confinement to bed on physician's orders, death/serious illness in the immediate family, or appearance in court. Supporting documentation will be required.

Recitation Activities: In addition to recitation being an additional venue for you to bring questions to (including homework questions) there will be recitation activities that you will be complete that complement your learning in lecture and lab. These will be graded on a completion basis.

Reports: You will be required to prepare **two** of the following three types of reports: review a journal article and address how it relates to your major, review a journal article and address the societal or ethical implications of science in the article, or review a talk given in the physics department.

The articles will come from journals such as: *Nature*, *Science*, *Physics Today*, *American Journal of Physics*, *Discover*, *Scientific American*, *The Physics Teacher*, *Physics World*, *Physics Education*, *New Scientist*, *Astronomy*, or *Sky and Telescope*. Details are available on the course website.

The raw score above is turned into a grade as below:

Final %	Grade
90-100	A- to A
80-89	B- to B+
70-79	C- to C+ etc.

Academic Integrity¹

Honesty is an essential part of academic integrity and at the heart of scientific research. Scientists and other scholars take pride in ownership of their own work. They do not take credit for the effort or ideas of others and do not tolerate those who do. This includes cheating, plagiarism and not contributing to group projects. This concept is based on mutual trust. If you cheat you are chipping away at your own moral character and undermining the overall integrity of our college society. Violations of this trust are acts of academic dishonesty; offenses will not be tolerated and may result in a zero on that assignment or in failure for the course.

Obviously, cheating on tests or quizzes involves using information to which you are not entitled such as copying or receiving information from a classmate or using notes other than those permitted by the instructor.

Plagiarism, according to *Webster's New Collegiate Dictionary* is to steal or pass off the ideas and words of another person as new and original an idea or product derived from an

¹Adapted from Dr. William L. Johnson's statement of academic integrity.

existing source. Obviously using work from another student who has previously taken this course is plagiarism.

Group work and group projects are valuable learning experiences, and will be the basis of most lab work. However, it is a form of dishonesty to claim credit for work to which you have not contributed.

I encourage students to work together in discussing methods of solutions to problems in homework assignments. Seek help from the instructor, but only after you have reached an impasse in your own concentrated effort. Much valuable learning can occur in the *active participation* in such discussions. However, because you are placing your name alone on an assignment, you should then write up your own original solutions. You are not being honest if you just copy another's solution without any thought of your own.

READ (and understand) the College's statements and procedures on Academic Integrity in the Undergraduate Catalog. Ask the instructor if you have any uncertainty about what is proper and what is not.

Disability Statement

As part of SUNY Cortlands commitment to a diverse, equitable, and inclusive environment, we strive to provide students with equal access to all courses. If you believe you will require accommodations in this course, please place a request with the Disability Resources Office at disability.resources@cortland.edu or call 607-753-2967. Please note that accommodations are generally not provided retroactively so timely contact with the Disability Resources Office is important. All students should consider meeting with their course instructor who may be helpful in other ways.

Diversity Statement

SUNY Cortland is dedicated to the premise that every individual is important in a unique way and contributes to the overall quality of the institution. We define diversity broadly to include all aspects of human difference. The College is committed to inclusion, equity, and access and thus committed to creating and sustaining a climate that is equitable, respectful and free from prejudice for students, faculty and staff. We value diversity in the learning environment and know that it enhances our ability to inspire students to learn, lead and serve in a changing world. We are committed to promoting a diverse and inclusive campus through the recruitment and retention of faculty, staff and students. As a community, we hold important the democracy of ideas, tempered by a commitment to free speech and the standards of inquiry and debate. To this end, we are dedicated to developing and sustaining a learning environment where it is safe to explore our differences and celebrate the richness inherent in our pluralistic society.

Inclusive Learning Environment Statement

SUNY Cortland is committed to a diverse, equitable and inclusive environment. The course instructor honors this commitment and respects and values differences. All students enrolled in this course are expected to be considerate of others, promote a collaborative and supportive educational environment, and demonstrate respect for individuals with regard to

ability or disability, age, ethnicity, gender, gender identity/expression, race, religion, sex, sexual orientation, socio-economic status or other aspects of identity. In an environment that fosters inclusion, students have the opportunity to bring their various identities into conversation as they find helpful, but are not expected to represent or speak for an entire group of people who share aspects of an identity. If you have any questions or concerns about this statement, contact the Institutional Equity and Inclusion Office at 607-753-2263.

Title IX Statement

Title IX, when combined with New York Human Rights Law and the New York Education Law 129-B, prohibits discrimination, harassment and violence based on sex, gender, gender identity/expression, and/or sexual orientation in the education setting. The federal Clery Act and NY Education Law 129-B provide certain rights and responsibilities after an incident of sexual or interpersonal violence. When a violation occurs, victims and survivors are eligible for campus and community resources. Where the College has jurisdiction, it may investigate and take action in accordance with College policy. If you or someone you know wishes to report discrimination based in sex, gender, gender identity/expression, and/or sexual orientation, or wishes to report sexual harassment, sexual violence, stalking or relationship violence, please contact the Title IX Coordinator at 607-753-4550, or visit cortland.edu/titleix to learn about all reporting options and resources. (Updated by SUNY Legal Feb. 1, 2018).

Tentative Class Schedule

Week	week starting	Chapter(s)	Topic
1	Jan. 23	1 & 2	Intro, Measurement, Motion in 1-D
2	Jan. 30	3	Motion in 2 and 3-D
3	Feb. 6	4	Forces and Motion
4	Feb. 13	5	Using Newton's Laws Test: Chapters 1-2 on Mon. Feb. 13.
5	Feb. 20	5	Using Newton's Laws cont.
6	Feb. 27	6	Energy Work and Power Report 1 due on or before Mon. Feb. 27.
7	Mar. 6	7	Cons. of Energy Test: Chapters 3-5 on Fri. Mar. 10.
8	Mar. 13		Spring Break
9	Mar. 20	8	Gravity
10	Mar. 27	9	Systems of particles
11	Apr. 3	10	Rotation
12	Apr. 10	11	Complex Rotation Test: Chapters 6-9 on Wed. Apr. 12.
13	Apr. 17	12	Static Equilibrium Report 2 due on or before Fri. Apr. 21.
14	Apr. 24	13	Oscillations
15	May. 1	21	Catch-up and Review

Final Exam from 8:30-10:30am on Wednesday, May 10, 2023
