

Eric Edlund

PHY202-001

Fall 2018

- Quizzes as mul. Choice are troublesome (too few q's)
- While very knowledgeable, he is not skilled in effectively disseminating this level of information. He belongs teaching higher level courses with students boasting more experience and aptitude.
- The notes taken in class could've been a little bit clearer with how different things connect to one another. I appreciate how ready for consultation my professor was.
- Professor Edlund has very much improved his second semester here however I still find the class very difficult. I also still feel the online homework does not benefit us even though I know he was trying to review the questions before assigning them. The midterm was relevant with in class problems which helped us all.
- Dr. Edlund wants us to understand and gives us the resources to understand. I just don't think the way I learn is compatible with how this course is taught. Readings are expected to learn parts of this course and I do not retain information be reading. The last few labs have been very helpful. I feel I understand magnets really well because of the discussions and visuals that were given. I think PLTL will be very beneficial.
