

Eric Edlund

PHY203-001

Spring 2020

- Everything online was perfect It felt like I was still in class learning everyday during class time, liked the interview final because I can better explain myself in person
- The Microsoft Teams meetings worked out really well, he was able to still present the material clearly and he was always very helpful and understanding. I really enjoyed this class.
- As far as online learning goes I liked the way you presented the lectures on Microsoft teams. I think having homework marked and returned would have been useful but I know that's hard to sort out on line.
- Given the circumstances the course has lost some of it effectiveness, but also Dr. Edlund has handled it very well. I believe that the course proceeded in the best way possible. The demos that were used were helpful despite the difficulty of demonstrating concepts over Microsoft Teams. The videos posted on our selected topics were helpful in place of demos. I believe that one way to supplement the course well would be something like a brief 5 minute mini lecture to prime student prior to coming to class. The mini lecture would help us get thinking about the material or allowing us to quickly review past material that will help us move along in class more easily. Otherwise, I can't think of much else to add to make the distance learning experience better.
