

Eric Edlund

PHY420-001

Fall 2018

- This class does not appear to benefit me for my major. I specifically asked for an example of what we were learning to relate to something I could use in my future classroom and Dr. Edlund flat out said no. He then continued to say how this wouldn't be used in a high school. If this is the case, why am I taking this course? I understand I should have a greater knowledge in the subject than my future students but there is absolutely nothing that I gained to use for my major/future career. Also when attending office hours Dr. Edlund comes off as condescending when we do not know/understand the material and is extremely off putting and makes me not want to ask for help even though we both know I need it.
- Come off your high horse and realize that you are teaching physics majors at Cortland. Specifically undergrad. This is not Cornell, this is not MIT, there is a difference between them and us and you clearly do not see it.
  - Unable to answer clarifying questions and does not care enough to listen to full questions from students before giving an answer, that doesn't even address the questions the student is trying to ask.
  - Pretentious af
  - Extremely ineffective
  - Learned more from Doug on the one day he came in then from Erik the entire semester.
  - Every other prof in the physics dept. goes by first names but you are too rude and have your head too high up your ass to see that you are in Cortland...
