

Eric Edlund

PHY529-501

Spring 2020

- I enjoyed the class very much despite its difficulty and the curve of getting familiarized with the mathematics and notation involved in these complex problems. I found that reworking similar problems for homework helped me to understand the material. The first time handling these problems is tough to keep up but the act of reworking a problem similar in nature really nailed concepts home as well as improve math ability. Great course and very helpful professor.
- The material presented was interesting and it was well-presented - I enjoyed the class quite a bit. Having more practice/feedback might have been helpful. The organization of the course didn't follow the original syllabus and was at times not perfectly clear.
