Hello professor, hope all is well and your family. Just to confirm this week is another off week and then next week we will be using blackboard for the rest of the semester. I just want to say that I am bummed out I did not get to continue with physics in a classroom setting. Labs were diving into topics I very much think about alot and lab was becoming incredibly fun. This was only due to yourself and the way you present the information as I've had many stale teachers in subjects that I liked in the past so I thank you for that. Dont change your teaching methods, we had a lot of young clueless people in that room but from a man who had no calculus, had not had physics since 2008, and one math course in 8years I think due to your teaching style and approach I picked up on things pretty quickly. If I can grasp concepts coming into class set up for failure then clearly your doing something very right. Have a great rest of the year sir
